SECTION 9 - WASTE IN PLACE

Summary by Waste Type and Year

Include all active and inactive sections of the landfill. Report waste disposed annually by type, if known, in tons per year. Report total waste disposed, if breakdown of types is not available. In the case where more than one landfill section operated in a given year identify each separately, if known. If the annual amount is not available, report the quantities for a range of years. If you include amounts from old, closed landfills then clearly identify them on the table and explain below. In each row, report quantities disposed each year (or group of years if individual years unknown) for each waste type. Report cumulative WIP at bottom (sum of annual quantities disposed). Add additional sheets as necessary.

Describe the collection, storage, treatment and disposal techniques used in managing the condensate:

Condensate generated in the horizontal gas collectors drains back into the landfill cell's leachate collection system where it commingles with leachate. Leachate and condensate is then pumped via pipe to a lined holding pond. Condensate generated by the landfill gas collection system and the LFGTE plant is removed by a series of knockout tanks that discharge via pipe to the lined holding pond. Liquid that

collects in the holding pond is removed by pumping into a tanker truck and hauled to a waste treatment facility.

Additional permit requirements for the 4th Quarter of 2012, as specified in Special Conditions #92 and #93 of the Operation Permit:

Special Condition #92

NYSDEC: Amounts of waste [mixed municipal waste, water and wastewater sludges, nonhazardous industrial waste and sludges, ash(es), construction and demolition debris, asbestos, compost, yard waste and contaminated soil] received from each New York State county on a county by county basis, from the United States on a state by state basis and from outside the country on a nation by nation basis.

Hyland: See Attachment #1

NYSDEC: Report on receipt of unauthorized wastes received during the quarter (see Solid Waste Management Permit Condition 43 of this permit).

Hyland: See Attachment #11

NYSDEC: The amount of leachate collected and hauled off-site on a daily basis and the disposal location. The daily logs of leachate level in the leachate storage tank shall be provided as well.

Hyland: See Attachment #2

NYSDEC: The amounts of liquid collected from the secondary collection system on a daily basis.

Hyland: See Attachment #2

NYSDEC: The monthly Action Leakage Rate for the secondary collection system of each cell or subcell of the landfill.

Hyland: See Attachment #2

NYSDEC: The date when liquid is detected in any leak detection location, including the amount of liquid removed from each location. This includes all leak detection locations including but not limited to those identified on the most recent approved weekly leachate inspection log.

Hyland: See Attachment #4. There was no leakage from pipes, only liquid from air vent & some stormwater present (from top) (est. 30 gallons in the quarter).

NYSDEC: The amount of ADC received during the quarter (on a monthly basis) and the amount of ADC stockpiled on-site at the end of the quarter.

NOTE: The A/B secondary transducer is generating erroneous flow numbers. In actuality there is very little flow as can be demonstrated by sump levels and pump data. To be conservative and is reporting the data thus demonstrating an ALR within limits. Troubleshooting is on-going.

Dear Mr. Munn:

Hyland Facility Associates (Hyland) performed leachate line cleaning starting on April 2, 2012 and completing April 9, 2012. The following Lines were cleaned by Global Environmental Industrial (GEI) with a high pressure water jet operating at 10,000 psi and at 24 gallons per minute. Cleanouts that are not directly connected to sumps were flushed with 1,000 gallons or more of water upon line cleaning completion or at the end of the workday.

Refer to the accompanying plan for the line designation.

Line Identification	Length	Note
Section 1	676.0'	Total Length Cleaned
Section 2	740'	Total Length Cleaned
Section 3	668.5'	Total Length Cleaned
Section 4 (North)	1504.5'	800' from North Cleanout
Section 4 (South)	(as above)	800' from South Cleanout

Attachment 10- Unauthorized Waste Received

August 8, 2012

John Munn
New York State Department of Environmental Conservation
Division of Solid and Hazardous Materials – Region 9
270 Michigan Avenue
Buffalo, New York 14203-2999

**RE: Hyland Facility Associates
Permit No. 9-0232-00003/00002
Unauthorized Waste**

Dear Mr. Munn:

On August 7, 2012, Hyland unintentionally accepted a load of friable asbestos that had not been previously approved by the Department. The scalehouse operator recognized a driver and a hauler as having made previous trips to Hyland with asbestos and subsequently made the erroneous assumption that the load was for disposal at the Hyland facility. Unfortunately, the driver had also made an error and had travelled to the wrong landfill; the load was manifested to the Waste Management landfill in Chaffee. The scalehouse operator did not fully scrutinize the manifest, misunderstood that the waste was not for Hyland, and allowed the load to dump. The error was not discovered until the truck had just discharged the load into a previously excavated trench. The material had not yet been covered, but Hyland directed the landfill operator to cover the asbestos to thwart any possibility of generating a hazardous condition.

The Facility acknowledges that the scalehouse operator is one of our first lines of defense against the acceptance of unauthorized waste. The operator failed to properly recognize documentation for a load that was clearly manifested to the Chaffee landfill. This operator, and the other scalehouse operators, have been retrained with the emphasis on attention to transportation documentation.

Transmitted here within are copies of the manifest and the scalehouse ticket. Documentation required to be submitted to the generator will be completed in compliance with rules and regulations. Kevin Hintz was notified of the incident on the day of the occurrence. Should you have any questions or require additional information, please call me at 585.466.7271.

Sincerely,

HYLAND FACILITY ASSOCIATES

**RE: Hyland Facility Associates
Permit No. 9-0232-00003/00002
Unauthorized Waste / Approval No. 3406**

Dear Mr. Munn:

On August 20, 2012, as you had witnessed, Hyland accepted a load of material that was profiled as soil impacted with oil based drilling mud. When the conveyance vehicle released the load onto the working face, however, it was discovered that the load was predominantly aqueous. Hyland operators were unable to recover the material without a significant trash and soil excavation. Hyland determined that since the material was ostensibly non-hazardous (as had been previously approved in solid form by the Department), the material was not recovered. There was no direction from the Department at the time that the material should be excavated.

The generator of the material, Talisman Energy, has been informed of the issue; steps to avoid a reoccurrence have been implemented. Additionally, because the material arrived in a truck that was not characteristically used to transport solids, operators and scalehouse personnel have been retrained to investigate *any* truck that is atypical to what is commonly observed.

Transmitted here within are copies of the manifest and the scalehouse ticket. Should you have any questions or require additional information, please call me at 585.466.7271.

Sincerely,

HYLAND FACILITY ASSOCIATES
